

AMENDMENTS TO THE CLAIMS

The current status of all claims in the Application is as follows:

1. (CURRENTLY AMENDED) An electric lamp comprising at least one vessel for producing and emitting visible electromagnetic radiation, a base for securing and making electrical contact with the lamp in a luminaire fitting, and a rotationally symmetrical rotary device connecting part which connects the base to one of the remaining parts of the lamp a housing, wherein the ~~connecting part is in the form of a rotationally symmetrical rotary device which makes it possible for~~ allows the remaining parts of the lamp housing to be rotated with respect to the base, when the base is secured in the luminaire fitting, about the axis of the lamp, the rotary device comprises a second part connected to the base of the lamp, and a first part connected to an outer surface of the housing, the first and second parts of the rotary device are latched into one another.

2. (CANCELED)

3. (CURRENTLY AMENDED) The electric lamp as claimed in claim 2 1, wherein ~~one of the two parts~~ the first or second part of the rotary device has a peripheral groove into which a peripheral tongue of the other first or second part of the rotary device engages.

4. (CURRENTLY AMENDED) The electric lamp as claimed in claim 1, wherein rotation of the rotary device is ~~designed such that the rotation is~~ limited to a maximum of 360°.

5. (CURRENTLY AMENDED) The electric lamp as claimed in claim 3, wherein each of the ~~two~~ first and second parts of the rotary device has a stop, the two stops being arranged ~~such that~~, at a specific angle of rotation, ~~they~~ so as to come into contact with one another between the ~~two~~ first and second parts of the rotary device and prevent any further rotation.

6. (CURRENTLY AMENDED) The electric lamp as claimed in claim 1, wherein the ~~lamp also has a housing for accommodating~~ accommodates an electrical or electronic circuit for lamp operation which is arranged between the at least one vessel and the rotary device.

7. (ORIGINAL) The electric lamp as claimed in claim 1, wherein the lamp is an incandescent lamp.

8. (ORIGINAL) The electric lamp as claimed in claim 1, wherein the lamp is a discharge lamp.

9. (ORIGINAL) The electric lamp as claimed in claim 6, wherein the lamp is a compact low-pressure discharge lamp.

10. (CURRENTLY AMENDED) The electric lamp as claimed in claim 1, wherein a movement and/or brightness sensor is fitted on the second part of the rotary device, which faces the at least one vessel, or on the housing for accommodating ~~the~~ an electrical or electronic circuit for lamp operation.

11. (CURRENTLY AMENDED) The electric lamp as claimed in claim 4, wherein each of the ~~two~~ first and second parts of the rotary device has a stop, the two stops being arranged such that, at a specific angle of rotation, ~~they~~ two stops come into contact with one another between the ~~two~~ first and second parts of the rotary device and prevent any further rotation.
